

system.gui.closeDesktop

This function is used in **Python Scripting**.

Description

Allows you to close any of the open desktops associated with the current client. See the [Multi-Monitor Clients](#) page for more details about using multiple monitors.

Client Permission Restrictions

This scripting function has no [Client Permission](#) restrictions.

Syntax

system.gui.closeDesktop(handle)

- Parameters

String handle - The handle for the desktop to close. The screen index cast as a string may be used instead of the handle. If omitted, this will default to the Primary Desktop. Alternatively, the handle "**primary**" can be used to refer to the Primary Desktop.

- Returns

- Scope

Client

Code Examples
