Manufacturing Execution System (MES) is a control system for managing and monitoring work-in-process on a factory floor. An MES keeps track of all manufacturing information in real time, receiving up-to-the-minute data from robots, machine monitors and employees. Although manufacturing execution systems used to operate as self-contained systems, they are increasingly being integrated with enterprise resource planning (ERP) software suites. The goal of a manufacturing execution system is to improve productivity and reduce cycle-time, the total time to produce an order. By integrating an MES with ERP software, factory managers can be proactive about ensuring the delivery of quality products in a timely, cost-effective manner. -TechTarget

Microsoft SQL Server

Created Mar 23, 2016 (22:12) , last modified Apr 17, 2021 (11:55) by Unknown User (null)

Abbreviation(s): MSSQL

Synonym(s): SQL Server

retrieve data.

Message Queueing Telemetry Transport is a standard machine-to-machine data transfer protocol. The **Cirrus Link** modules are often referred to as the "MQTT modules" because they use this protocol to send data between the server and devices.

Multivariate

Created Mar 17, 2016 (18:22) , last modified Apr 17, 2021 (11:55) by Unknown User (null)

Having or involving a number of independent mathematical or statistical variables. -[Merriam-Webster](#)

MySQL

Created Mar 23, 2016 (22:13) , last modified Apr 17, 2021 (11:55) by Unknown User (null)

A relational database. Ignition connects easily to it and can use it to store or retrieve data.
